

# Environmental Objectives

CBI-electric: low voltage has identified the type of environmental impacts that our plants' operational, manufacturing and service activities have on the environment. These impacts have been assessed and CBI-electric: low voltage, have identified which aspects potentially have a major impact on the environment.

To reduce the risk of occurrence of these impacts on the environment, CBI-electric: low voltage has set the following objectives:

- Measure and reduce waste by:
  - Promoting general waste recycling.
  - Implementing plastic recycling.
  - Recycling of all ferrous and non-ferrous metals.
- Promotion of energy and resource conservation by:
  - Reducing paper usage.
  - Reducing water usage.
  - Reducing power usage.
- Proper control of chemical substances by:
  - Complying with the legal requirements and customer specific requirements.
  - Recycling or safe disposal of hazardous chemicals.
  - Reducing and/or eliminating the use of hazardous substances.
  - Training of personnel involved in the handling of chemicals.
- Development of environmentally friendly products by:
  - Reducing the products energy consumption.
  - Identifying recyclable components in the product.
  - Elimination of restricted substances and substances of high concern as detailed in the REACH and RoHS directives.
  - Establishment of product disposal procedures.

CBI-electric: low voltage, will provide adequate resources to ensure that the policy, is communicated, understood, implemented and maintained throughout all levels of operation within the company.
